

RaySearch Laboratories & Vision RT:

Smarter Planning Starts Here

📍 VISIT BOOTH 240 FOR A DEMO

MapRT, Vision RT's clearance mapping solution, is now fully integrated with RaySearch's treatment planning system, RayStation®.

This integration streamlines the planning process by enabling in-system clearance checks during treatment planning—supporting faster, safer, and more personalized radiation therapy.

Why It Matters:

- ✓ **Streamlined Workflow:** Beam trajectory clearance is shown in RayStation during plan optimization — no need for external exports.
- ✓ **Immediate Feedback:** Instantly visualize clearance results as beam trajectories are adjusted, saving time and reducing iterations.
- ✓ **Enhanced Beam Safety:** Verify gantry and couch angles for safer beam delivery.
- ✓ **Smarter Non-Coplanar Planning:** Confidently explore complex beam trajectories for optimal dose distribution.
- ✓ **Better Outcomes:** Improve organ-at-risk sparing without compromising treatment quality.
